

STRAW FIBERBOARD >

STRAW FIBERBOARD

DESCRIPTION:

Straw fiberboard is ideal for interior walls, underlay or cabinet work.

Formed of pressed straw fibres into 49"x96" sheets, strawboard resembles wood particleboard to the untrained eye. Yet unlike wood particleboard it is considered by Health Canada to be a non-offgassing product.

Its benefits include:

- Straw is a renewable resource
- It holds nails and screws better, is more water resistant and less prone to sagging than wood particleboard

- It is dense like an HDF or MDF and can be beaded with a router to look like wainscoting or other decorative features

Available in different thickness for a variety of applications
1/2" as a luan plywood/underfloor for tile, linoleum or cork;
3/4", 5/8" and 1" for non fire rated interior walls, as a drywall sheeting replacement, for furniture, cabinet and shelving applications or for making baseboard and other moulding and trim.

ORDER & DELIVERY:

Minimum Orders: We aggregate orders between multiple people until it totals one skid load (30-50 sheets) and then order it on behalf of buyers

Delivery Time: Pick-up only, from Hillsburgh, ON (1 hr north of TO, 25 minutes east of Guelph)
