

# NATURAL THINNERS & SOLVENTS >

We carry the ECO-HOUSE solvent system, a three-product system that offers three volatile solvents and thinners of gradual strength. All products are free of aromatic and chlorinated hydrocarbons.

Solvents dissolve resins, oils, waxes and fats. But they are also capable of harming vital fat tissue in the human body. This means that by definition a solvent cannot be totally harmless. However, not always the most aggressive solvent is required to do the job. The ECO-HOUSE solvent system allows the painter to make a well-targeted choice in the degree of solvent potency in order to mitigate health risks.

## EXTRA MILD CITRUS THINNER (# 115)

### DESCRIPTION:

This is a medium-strength, general-purpose thinner and mild solvent. It is a combination of highly purified mineral oils as used in pharmaceuticals and cosmetics, and natural essential oils.

Use for:

Thinning and clean-up of all oil-based Eco-House products, resins, gums, varnishes and waxes

Also used as a volatile medium with most conventional oil-based paint products including fine artist's oil paints

Not suitable for dissolving hard resins, such as dammar or copal

---

## NEUTRALTHIN (# 125)

### DESCRIPTION:

NeutralThin is a practically odourless, general-purpose thinner, brush cleaner and volatile painting medium for oil-based paints and artist paints. This hypoallergenic formula without essential oils has been used successfully for chemically sensitive

persons for more than a decade. However, due to the individual uniqueness of allergic reactions, exceptions are possible.

## NATURAL ORANGE TERPENE SOLVENT (# 915)

### DESCRIPTION:

Natural Orange Terpene Solvent is the most potent solvent in the Eco-House solvent system. Technically, this product can be a full-fledged substitute for turpentine, since it dissolves damar resin solids, hardened paint etc.

Like many natural essential oils it can have a sensitizing

effect on sensitive persons if it is used too liberally. Therefore it should be used only in well-ventilated areas for those tasks where its use is unavoidable. Natural Orange Terpene Solvent is mixable with other Eco-House solvents ( # 115 and # 125 ) in any desired ratio.
